

**To calculate the area of a square:**

Multiply the length by the width.

*Example:*  $25' \times 25' = 625$  sq. ft.

**To calculate the area of a rectangle:**

Multiply the length by the width.

*Example:*  $40' \times 15' = 600$  sq. ft.

**To calculate the area of a circle:**

- Measure the radius (half the distance across).
- Multiply the radius by the radius.
- Multiply that number by 3.14.

*Example:*  $20' \times 20' = 400 \times 3.14 = 1,256$  sq. ft.

**To calculate the area of a triangle:**

Multiply the base by the height.

Divide that number by 2.

*Example #1:*  $10' \times 10' = 100' \div 2 = 50$  sq. ft.

*Example #2:*  $15' \times 10' = 150' \div 2 = 75$  sq. ft.
